

## NMF-KDZS60-10

# NIKOMAX heat-shrinkable plastic sleeve, 60mm, 10 pcs.

The set for protection of the welded joint (heat-shrinkable sleeves) is intended to provide mechanical strength, moisture resistance and protection against any damage to the welded joint of optical fibers. With heat shrinkable sleeves, it is possible to use both fiber in primary (250 microns) and in secondary (900 microns) buffer coating. The sleeve consists of two tubes: external heat shrinkable and internal hot melt. Between the tubes there is a power element - a rod made of stainless steel, which prevents bending of the welding point.

NMF-KDZS60-10 heat shrinkable sleeves have a length of 60mm and comes in a package of 10 pieces.
